

Winfield Carburetor

INDIANAPOLIS, May 30th. Every car that finished the race with the exception of one (tenth place) was equipped and powered with the new model "S" Winfield Carburetor.

READ WHAT THE WINNERS SAY

The Winfield Carburetor on my Miller Hartz Special performed wonderfully and surely helped me win the Indianapolis Race. I cannot thank you enough for your help and will always recommend the Winfield to all car owners who want more power, speed, acceleration and economy.

BILLY ARNOLD... First Place

Without the Winfields on my Miller Schofield Special I never could have won second place in the Indianapolis Race. Winfield increased my mileage from 7 to 12 miles. The Winfield Carburetor is certainly marvelous.

SHORTY CANTLON... Second Place

I owe my success in winning third place in the Indianapolis Race to the rapid acceleration, top speed and smooth performance of the Winfield Carburetor. I would not consider using any other carburetor on my personal car or race car.

LOUIS SCHNEIDER... Third Place

For the third year in the Indianapolis Race I have used Winfield Carburetors and would not think of using any other make of carburetor.

LOUIS MEYER... Fourth Place

The Significance of this Overwhelming Evidence

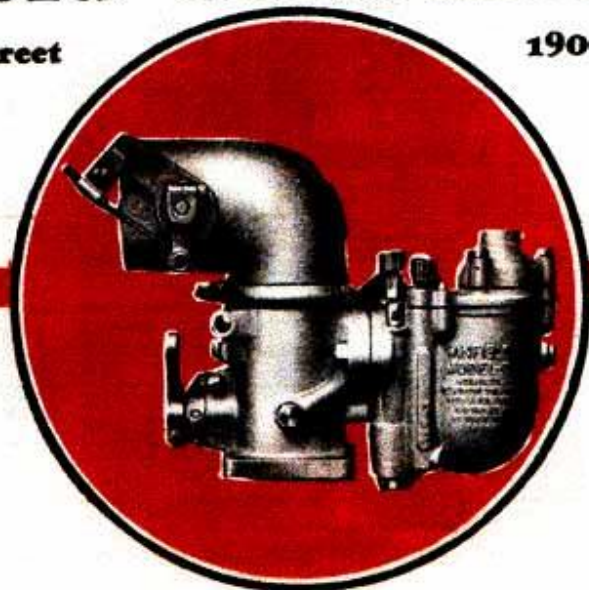

The Winfield Carburetors which won this Race were taken from the regular production line. They were absolutely stock in every detail... even to size. The Winfield carburetor made for your car is identically the same in every respect to the Winfields used at Indianapolis. This fact is of special significance to you. It means that

the Winfield Carburetor you will put on your car has been tested and proved on the severest proving ground known to the automotive industry. Furthermore, it means there is no other carburetor on the market equal to Winfield for speed, power, acceleration, economy and reliability.

Winfield Carburetor Co.

3053 Treadwell Street
Los Angeles, Cal.

1900 E. Jefferson Ave.
Detroit, Mich.

See what this carburetor will do to increase the performance of your car. Then you will know how good it really is.

Winfield is available for both updraft and down-draft installations. This photo shows a down-draft installation.
